EuRREB Registries: Guidance on the Role of Authors, Contributors and Publication Review
This guidance is intended to ensure that contributors making substantive contributions to EuRREB Registries studies are given due credit and that they understand their roles and responsibilities in being held accountable for future publications.

Publication Review prior to submission
Researchers will enable the EuRREB Project Management Team to review publications, including abstracts, before submission, in accordance with any publication arrangements that are set out in the Mail of Approval sent to the Researcher. This review will be limited to potential issues with authorship including author order, acknowledgement of contributors, and data protection and compliance, rather than a deep scientific review. Authors remain fully responsible for the scientific content, accuracy, conclusions, and final approval of the publication before submission.

Defining the role of authors and contributors
Authors
Authorship on EuRREB outputs is based on the International Committee of Medical Journal Editors (ICMJE) recommendations: https://www.icmje.org/recommendations/browse/roles-and-responsibilities/defining-the-role-of-authors-and-contributors.html.

When a multi-author group has conducted the work, the investigators should decide who will be an author before the work is started and confirm who is an author before submitting the manuscript for publication. All members of the group named as authors should meet all four criteria for authorship:

1. Contributions to the conception, design, acquisition, analysis or interpretation of the work
2. Drafting and revising the work
3. Approving the final version of the work prior to dissemination
4. Accountability for all aspects of the work

Contributors
Those who meet fewer than all 4 of the above criteria for authorship should not be listed as authors, but acknowledged, either individually or as a group, and their contribution should be specified. Centres and reporters that have uploaded data into the Registries that has been used to conduct the study should be acknowledged.

Examples

- Group acknowledgement: Clinical Investigators, Participating Investigators
- Specified contributions: served as scientific advisors, critically reviewed the study proposal, collected data, provided and cared for study patients, participated in writing or technical editing of manuscript

ERN affiliation acknowledgment
The publications are included in the Continuous Monitoring process, and incorrect citation may lead to their exclusion. Please refer to the publication guideline of the corresponding ERN.

1. Endo-ERN
2. ERN BOND
